Soil and Plant Monitoring

Our goal is to employ optical (VIR) sensing to monitor the fields and make prompt crop management decisions.

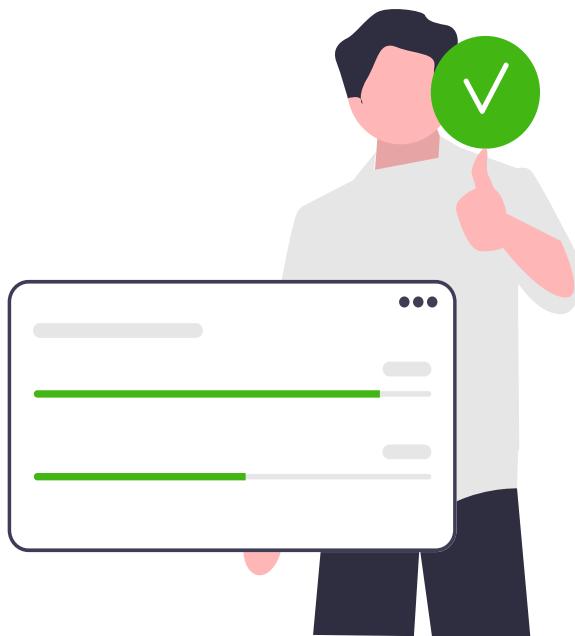

[Back](#)[Next](#)

Early detection of plant and soil diseases

our project can detect plant and soil diseases using an existing camera sensor that tracks the plants in real-time day by day.

Predictive Analysis of Crop Yield

Using satellite imagery, image processing, deep learning, computer vision, and remote sensing, we can predict crop yield and address issues proactively.

About Wheat

Description

Nutritional benefits

Planting time

- **Wheat** is a grass widely cultivated for its seed, a cereal grain that is a worldwide staple food.
- **Wheat** is a highly nutritional and widely-cultivated cereal grain. For over 7 centuries, wheat has been raised and harvested in many countries around the world. It's one of the world's most important crops and holds the title of the second most-produced grain in the world, beaten only by corn.

About Wheat

[Description](#)[Nutritional benefits](#)[Planting time](#)

- The most appropriate date in the Delta and Lower Egypt is from 15-30 November. And the delay in this date causes a decrease in the crop at a rate of at least 25 % as a result of the high temperatures in the last growth stages. Early, leads to a lack of crop due to low contract rates and the fullness of pills.

Confirm the diagnosis

- Small, circular, reddish to purple spots on bark.
- Development of cankers with upward curled margins.
- creamy white fungal growth in their center.
- brown spot and patches on fruits and leaves.

Symptoms first appear as brown, depressed, circular spots that are flat to slightly sunken with a light brown center; spots may occur singly or be numerous. As the spots extend, fungus fruiting bodies (acervuli) develop in the center, often in concentric rings giving the appearance of a bull's eye.

2

Recommendations

Organic Control. The application of a Bordeaux mixture or copper sulphate after harvest can reduce the incidence of
